Current ATF extraction line program

Philip Burrows

ATF2 Project Meeting, KEK 01/6/06

$ATF \rightarrow ATF2$

Transition period

Winter 2007 / Spring 2008

What level of ATF operations are possible during ATF2 beamline construction?

When will be hard downtime?

Plans for transition to new extraction line?

Current program

Laserwire (Blair) FONT (Burrows) NanoBPMs (Honda/Ross) IP BPM (Honda) MonaLISA (Urner) Ring beam dynamics

. . .

Fast extraction kicker (Naito) Compton source (Omori) ODR (Karataev) Crystal channeling (Takahashi)

FONT

Welcome opportunity to run in Winter 2007

Like to install in upstream portion of new extraction line ASAP thereafter

As long as BPM(s) + kicker(s) are in place, FB or FF hardware can be added later ...

... or leave space for later insertion of BPM(s) + kicker(s)

By 2008 we expect to be ready for 20-60 bunch beam

Philip Burrows
